

Ultrasound examination

How to prepare for the examination?

The examination does not require any preparation from you.

How is the examination done?

The ultrasound examination is painless. During the examination, you are lying on your back on the examination table with the examined area exposed. The probe is moved on the skin over the organ to be examined. A lubricating gel is used between the probe and the skin.

The examination usually takes 10 to 30 minutes. Please be aware that our department also conducts other emergency on-call examinations, therefore your examination time might vary.

What about after the examination?

The examination does not require follow-up. The referring unit is responsible for reporting the results of the procedure.
